

**FOGGERS – Some of the foggers we use to fog with Chrisal**

As Chrisal users know, fogging with Chrisal's StaBiotic™ Mist - our Probiotic Environmental Control (PEC) is a wonderful tool. Since many of you have asked what foggers are best to use, we are sharing the following information:

The below two foggers have worked very well for all of us and our clients to date - and we will send out information on any additional new units we try that work well. We will also give you the information on prices and sources as they come in. In the future we will try to source direct from the factory and pass on the cost savings to our Chrisal Family.

Note that some people use a battery powered hand paint sprayer (like from Home Depot), which is ok for getting into an a/c unit or spraying close up, but not good for rooms of any size.

Regards,
Lino

FOGGER TYPES, PRICING & ADDRESSES OF SITES:

There are a number of foggers on the market. The two that we find the easiest to use so far are:

1) The FOG MASTER JR. from Fog Master Corp.

This unit is perfect for offices, small facilities, homes, coops, sheds, cars, etc. You can buy direct from <http://www.fogmaster.com/> Tel: 954/ 481-9975 – And you will also find it on Amazon, perhaps cheaper – but note that Google will give you many other sources and pricing, which can range from about \$99 to \$125.

The Fog Master Jr. holds one quart of water - and adding an ounce of Probiotic Environmental Control (PEC) - is all that is normally needed for most small jobs. This unit is perfect for homes or small businesses. For strong smells such as a smoke smell, you can put in as many ounces as needed per quart, but for these size units, usually two ounces of Chrisal is all that is needed unless it is an a really bad situation..! Then use 4-8 ounces. One quart of dilution can cover up to 5,000 square feet. AND IS ALSO PERFECT FOR ALL YOUR AIR CONDITIONING SYSTEMS..! For Animal & Poultry Housing, one quart of concentrate should be used for each 5,000 square feet at not more than 50% dilution.

Check the internet for all models as there may be cheaper prices available. Your coverage may vary depending on how high the fogger dial is set at and how used.

1) the Curtis DYNA FOG HURRICANE (for Large Facilities, Barns & Big Jobs)

The Hurricane sells for from \$199.95 to \$250.00 plus shipping on the internet. This unit is good for all larger areas and commercial facilities, including gyms.

You can get coverage of up to 30,000 square feet or more with just one filling – and you use it by walking at a normal speed and swinging the fogger from side to side. The Hurricane holds one gallon of water and for normal fogging mix two to four ounces of Probiotic Environmental Control, (PEC), per gallon. For stronger smells such as a smoke smell, you can put in 6 to 10 ounces and for overpowering situations, dilute 50/50%.

For additional information please feel free to contact us at: Info@ChrisalUSA.com www.ChrisalUSA.com or call Howard Zalkin @ 305-796-6334.
